BY W. SEGERS ¹, F. SWINNEN ² & A. ABREU ³

ABSTRACT. An up to date checklist of the marine molluscs of the archipelagos of Madeira and the Selvagens is presented. This list contains about 850 species and is the result of the study of a considerable amount of material obtained in various ways, of the examination of various museum collections and of an extensive literature review on the subject.

KEY WORDS: Mollusca, marine, Madeira, Selvagens, NE Atlantic, checklist.

RESUMO. No presente trabalho é apresentada uma lista actualizada dos moluscos marinhos dos arquipélagos da Madeira e das Selvagens. A lista contém cerca de 850 espécies e é o resultado do estudo de uma substancial quantidade de material obtida de várias formas, do estudo de várias colecções museológicas e de uma extensa revisão bibliográfica.

INTRODUCTION

The interest in the marine mollusc fauna of Madeira started, in the mid-19th century, with the first checklist published by Mac ANDREW (1854) reporting 125 species and continued over the next 50 years, resulting in publications by famous malacologists such as JEFFREYS (1867), MANZONI (1868) and of course, AUGUSTO NOBRE (1889, 1894, 1905) and the Rev. BOOG WATSON (1873, 1885, 1891, 1897). In his 1897 publication, his major work, Watson added the findings from the archipelago of the Selvagens to those from the archipelago of Madeira, most probably for political reasons, and ended up with a record of 382 species.

In the following century, only NOBRE (1937) published a complete list using the same geographical boundaries as Watson, recording 405 species, and FRITZ NORDSIECK & FRANCISCO TALAVERA (1979) presented their work on the marine gastropods of the Canary Islands and Madeira, including the Selvagens, based on the records of TALAVERA (1978).

Later authors such as J. Van Aartsen, R. Moolenbeek, S. Gofas, P. Bouchet and A. Warén, amongst others, brought a new influx of very valuable but scattered results from the findings of the CANCAP Expeditions (1975-1986) and the Seamount 1 & 2 Expeditions (1987- 1993). Although the study of material from these expeditions is still ongoing, those data which have been published gave a boost to the interest in the marine fauna of the north-eastern Atlantic and its archipelagos. These new data, together with new specimens from the SEPLAT Expedition (1992) in Madeira and the PSMAC Expedition (2000) in Porto Santo, complemented with recent collections made by the staff of the Museu Municipal do Funchal (História Natural), resulted in the idea to make an updated checklist of the marine malacological fauna of the archipelagos of Madeira and the Selvagens, following Watson and Nobre. While this idea was being developed, CERVERA *et al.* (2004) added a lot of information on the Opisthobranchiata from Portugal and Spain.

The major goal of this work is not only to give a complete review of the species recorded from the area, but also to correct, as far as possible, the mistakes made in the past.

In order to achieve this goal, the authors gathered a lot of literature on the subject and, in cooperation with the Malacological section of the Museu Municipal do Funchal (História Natural), Madeira, collected, sorted and identified a large amount of material from the above cited expeditions, from some other smaller expeditions and from some occasional dredging works. A minor amount of material was collected by divers in shallow water or on the

shore, or by snorkelling. All these findings were compared with material in collections from different museums, such as the Mac Andrew / Watson / Norman collections in London, the Melvill-Tomlin collection in Cardiff, the Nobre collection in Porto, the Nordsieck / Talavera collection in Tenerife and the Nordsieck collection in Frankfurt. Material from the CANCAP Expedition in Leiden / Amsterdam as well as from the TRAVAILLEUR & TALISMAN, PRINCE OF MONACO and ABYPLAINE expeditions in Paris, was also studied.

This checklist has been updated up to the 31st of December 2008 and contains about 850 species. Some of these species could not be identified and are marked as “sp.”. All accepted taxa (about 750 species) are marked in bold. Doubtful or rejected records (about 100 species), are not marked in bold.

The taxonomy adopted in the present checklist follows CLEMAM (Checklist of Recent European Marine Molluscs).

Timoclea ovata (Pennant, 1777)
 Genus *Gouldia* Adams, C.B., 1847
Gouldia minima (Montagu, 1803)
 Genus *Pitar* Roemer, 1857
Pitar mediterraneus (Dautzenberg, 1891)
 Genus *Callista* Poli, 1791
Callista chione (Linné, 1758)
 Genus *Irus* Schmidt F.C., 1818
Irus irus (Linné, 1758)
 Genus *Venerupis* Lamarck, 1818
Venerupis corrugata (Gmelin, 1791)
 Family **PETRICOLIDAE**
 Genus *Mysia* Lamarck, 1818 ex Leach ms.
Mysia undata Pennant, 1777
 Order **MYOIDA**
 Family **GASTROCHAENIDAE**

Genus *Gastrochaena* Spengler, 1783
Gastrochaena dubia (Pennant, 1777)
 Family **HIATELLIDAE**
 Genus *Hiatella* Bosc, 1801 ex Daudin ms
Hiatella arctica (Linné, 1767)
 Family **TEREDINIDAE**
 Genus *Lyrodus* Binney, 1870 ex Gould ms.
Lyrodus pedicellatus (de Quadrefages, 1849)
 Genus *Psiloteredo* Bartsch, 1922
Psiloteredo megotara Hanley & Forbes in Hanley, 1848
 Genus *Teredora* Bartsch, 1921
Teredora malleola Turton, 1822
 Genus *Bankia* Gray, 1840
Bankia bipennata (Turton, 1819)
Bankia carinata (Gray J.E., 1827)
 Genus *Nototerredo* Bartsch, 1923
Nototerredo sp.
 Family **XYLOPHAGIDAE**
 Genus *Xylophaga* Turton, 1822
Xylophaga dorsalis (Turton, 1819)
 SubClass **ANOMALODESMATA**
 Order **PHOLADOMYOIDA**
 Family **THRACIIDAE**
 Genus *Thracia* Leach in de Blainville, 1824
Thracia corbuloides Deshayes, 1830
Thracia papyracea (Poli, 1791)
Thracia pubescens (Pulteney, 1799)
 Family **PANDORIDAE**
 Genus *Pandora* Bruguière, 1797
Pandora pinna (Montagu, 1803)
 Family **LYONSIIDAE**
 Genus *Lyonsia* Turton, 1822
Lyonsia norwegica (Gmelin, 1791)
 Family **POROMYIDAE**
 Genus *Poromya* Forbes, 1844
Poromya tornata (Jeffreys, 1876)
Poromya granulata (Nyst & Westendorp, 1839)
 Family **VERTICORDIIDAE**

Genus *Verticordia* Wood, 1844
Verticordia acuticostata (Philippi, 1844)
Verticordia granulata Seguenza, 1860
 Genus *Policordia* Dall, Bartsch & Rehder, 1938
Policordia gemma (Verrill, 1880)
Policordia jeffreysi (Friele, 1879)
 Family **CUSPIDARIIDAE**
 Genus *Cuspidaria* Nardo, 1840
Cuspidaria cuspidata (Olivi, 1792)
Cuspidaria rostrata (Spengler, 1793)
 Genus *Tropidomya* Dall & Smith, 1886
Tropidomya abbreviata (Forbes, 1843)
 Genus *Cardiomya* Adams A., 1864
Cardiomya costellata (Deshayes, 1835)
Cardiomya curta (Jeffreys, 1876)
 Genus *Protocuspidaria* Allen & Morgan, 1981
Protocuspidaria colpodes (Dautzenberg & Fischer H., 1897)

Class **SCAPHOPODA**

Order **DENTALIIDA**
 Family **DENTALINIDAE**
 Genus *Dentalium* Linné, 1758
Dentalium agile Sars M. in SarsG. O., 1872
 Order **GADILIDA**
 Family **ENTALINIDAE**
 Genus *Entalina* Monterosato, 1872
Entalina tetragona (Brocchi, 1814)
 Family **PULSELLIDAE**
 Genus *Pulsellum* Stoliczka, 1868
Pulsellum lofotense (Sars M., 1865)
 Family **GADILIDAE**
 Genus *Cadulus* Philippi, 1844
Cadulus gracilis Jeffreys, 1877
Cadulus jeffreysi (Monterosato, 1875)
Cadulus monterosatoi Locard, 1897

ACKNOWLEDGEMENTS

The present checklist could never have been published without the help of many people especially from colleagues, technicians, specialists in various fields, curators of museum collections and their collaborators. We are greatly indebted to all of them, including all those we forgot to mention.

Bruno Anseeuw, Manuel Biscoito, Philippe Bouchet, José Borges, Franck Boyer, Lucas Cervera, Julien Cillis, Luisa Costa, Luis Miguel Andrade Costa, Roland De Prins, Winfried Engl, Dirk Fehse, Mafalda Freitas, Magno Freitas, Jennifer Gallichan, Daniel Geiger, Jeroen Goud, Virginie Héros, Michael Hollmann, Roland Houart, Ronald Janssen, Manfred Kaufmann, Lars Kellner, Angel Luque, Amelia Maclellan, Manuel Malaquias, Paolo Mariottini, Pasquale Micali, Constantinu Mifsud, Robert Moolenbeek, Kevin Monsecours, Graham Oliver, Marco Oliverio, the late José Otero, Guido Poppe, Emilio Rolan, Danilo Scuderi, João Sá Pereira Silva, Carlo Smriglio, Francisco Talavera, Lionello Tringali, John Van Aartsen, Katy Way, Peter Wirtz, Harriet Wood.

NOTES ON TWO MADEIRA PLANTS

By N. C. H. KRAUSS ¹

The composite plant «Abundância» (*Eupatorium adenophorum* Spreng.) has been known in Madeira for many years. On July 24, 1962 I collected a second species of *Eupatorium*, *E. riparium* Schultz-Bip., confirmed by the Royal Botanic Garden, Kew, England. This was growing in association with *E. adenophorum* in a damp area along a path near Monte. Both these species of *Eupatorium* are native to Mexico. I have seen *E. riparium* growing along a small stream in a ravine at the Desierto de los Leones, Distrito Federal, in the hills above Mexico City. Both species are pests in grazing land in Hawaii.

On November 7, 1960 I collected specimens of *Ulex minor* Roth (determined by Royal Botanic Garden, Kew) in the grassy hills above Ribeiro Frio. Since then I have seen it also at Encumeada and Santo da Serra. *Ulex europaeus* L. has been known in Madeira for a long time, but I have not seen any records of *U. minor*.
